Biology Quiz - Cell Structure

1. Which organelle produces ATP in a eukaryotic cell?

A. Nucleus

B. Mitochondrion

C. Ribosome

D. Golgi apparatus

Answer: B

Biology Quiz - Cell Structure

2. The mitochondrion is the site of ATP synthesis.

( ) True

( ) False

Answer: True

Biology Quiz - Cell Structure

3. The chemical symbol for sodium is ___.

4. Water is made of one oxygen and two ___ atoms.

Answers: Na; hydrogen

Biology Quiz - Cell Structure

5. Explain why ice floats on liquid water.

(three sentences)

Answer: ice is less dense than water because its hydrogen bonds hold the molecules in an open lattice.

Biology Quiz - Cell Structure

6. Match each organelle with its job.

1. Nucleus A. Packages proteins for export
2. Golgi apparatus B. Holds the DNA
3. Ribosome C. Builds proteins

Answers: 1-B, 2-A, 3-C

Biology Quiz - Cell Structure

7. A cell is placed in a salty solution.

(a) What happens to the cell? Explain.

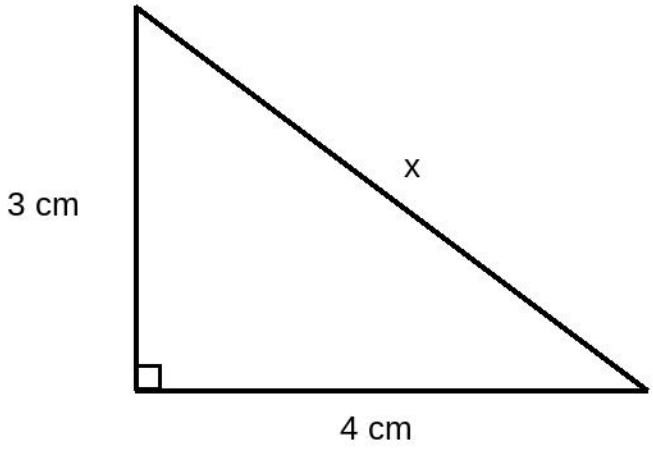

(b) Name the process responsible.

Answers: (a) water leaves, the cell shrinks; (b) osmosis

Biology Quiz - Cell Structure

8. The triangle below has legs 3 cm and 4 cm.

What is the length of the hypotenuse?

Answer: 5 cm
